UITS-FAQ's for Large Classrooms

Please make sure that you take the following precautions to eliminate any potential conflicts:

1.)   Have students turn wireless off on all devices except the device that they will be using for the evaluation. Remember many students come with more than one device – laptop, smartphone, Nook, Kindle. Even though these devices might be in their backpacks, if they have a wireless adapter installed, the device will still automatically try to associate with the access points thus causing potential traffic issues.

2.)   If the device that they are going to use has 4g access, have them turn off wireless and use 4g instead. This will help free the wireless network of undo traffic.

3.)   If there is software to be downloaded for the SET Evaluation have them do this before the class. There is no telling what may happen to the server if 200+ students are trying to download data at the same time.
